

ALGORITHM: MYPORTFOLIO: EASY WAY TO CREATE YOUR AMAZING PORTFOLIO

1. Display Navigation Bar:

- Create a navigation bar with links for Sign in, Signup, Contact us, and About us.

2. Display Homepage:

- Show a welcome message and an image on the homepage.

3. Sign in Page:

- Create a form with input fields for email and password.
- Perform client-side validation on the form fields.
- Upon form submission, validate the inputs and either display an error message or navigate to the Dashboard page.

4. Signup Page:

- Create a form with input fields for first name, last name, email, and password.
- Perform client-side validation on the form fields.
- Upon form submission, validate the inputs and either display an error message or register the user.

5. Dashboard Page:

- Display a heading and an image on the dashboard page.

6. Contact Us Page:

- Show the contact information, including address, email, and phone number.

7. About Us Page:

- Display information about the developer, including their name, skills, and interests.

8. Routing Configuration:

- Define the routes for each page/component and associate them with their respective URLs.

9. Handle Form Submissions:

- Implement the logic to handle form submissions, including validating the inputs and performing appropriate actions based on the form data.

10. Implement Component Classes:

- Create the necessary component classes and define the required properties and methods for each component.

11. Implement Validations:

- Define the validation rules for the form fields, such as required fields, email format, and password length.

12. Styling:

- Apply CSS styles to the components and HTML elements to achieve the desired visual appearance
