Algorithm: Building A Restaurant Website with Bootstrap

1. **Set up the project:**
   Create a new project directory.
   Inside, create index.html for HTML structure and styles.css for custom styles.
   Link Bootstrap CSS and JavaScript in index.html.

2. **Design the layout:**
   Use HTML to create a basic structure.
   Design the landing page with a navbar, hero section, and sections for restaurant details and bestsellers.
   Utilize Bootstrap's grid system for a responsive layout.
   Customize styles in styles.css to match the restaurant's branding.

3. **Add content and components:**
   Fill in restaurant details like name, address, contact info, and overview.
   Use Bootstrap components for design and functionality.
   Integrate a carousel for showcasing images.
   Include a CTA button for specific actions.
   Implement a grid layout for bestsellers with images and descriptions.

4. **Create a contact form:**
   Add a contact form section.
   Use Bootstrap's form components for name, email, message, etc.
   Handle form submission with JavaScript for validation.
   Send form data to a server-side script or API.
   Display success or error messages based on the submission response.

5. **Implement additional features:**
   Enhance UX with JavaScript interactions and animations.
   Utilize jQuery or other plugins for modal pop-ups, tooltips, etc.
   Test responsiveness and functionality across devices and screen sizes.
