File Handling Algorithm: Name: Pramod

1. Declare the filename, content to write, and content to append.
2. To write to a file:
   ➢ Create a File Writer object for the file.
   ➢ Call the write() method on the File Writer object to write the content to the file.
   ➢ Close the File Writer object.

3. To read from a file:
   ➢ Create a Buffered Reader object for the file.
   ➢ Create a String variable to hold each line read from the file.
   ➢ Use a while loop to read each line from the file and store it in the String variable.
   ➢ Close the Buffered Reader object.

4. To append to a file:
   ➢ Create a File Writer object for the file and set the second parameter to true to enable appending.
b. Call the write() method on the File Writer object append the content to the file.
   ➢ Close the File Writer object.
