EMP No: 2577108
Name: Pramod

Algorithm: Product Details Portal

productForm.jsp:

1.Open an HTML form with the action set to "AddProductServlet" and method set to "post."
2.Include input fields for Product Name, Product Description, and Product Price.
3.Add a submit button to submit the form.
4.Include a link to "confirmation.jsp" to view product details.

confirmation.jsp:

1.Retrieve the list of products from the session.
2.Display a table with columns for Name, Description, and Price.
3.Iterate through the list of products and display each product in a new row of the table.
4.Provide a link to "productForm.jsp" for adding another product.

Product.java:

1.Define a Java class Product with private fields for productName, productDescription, and productPrice.
2.Provide getter and setter methods for each field.

AddProductServlet.java:

1.Create a servlet class AddProductServlet that extends HttpServlet.
2.Override the doPost method to handle form submissions.
3.Retrieve product information (name, description, price) from the request parameters.
4.Create a new Product object and set its properties.
5.Get the list of products from the session or create a new list if it doesn't exist.
6.Add the new product to the list.
7.Redirect the user back to "productForm.jsp" after adding the product.
